

APPROVAL FORM

Software Launch

This form establishes formal client acceptance of all project deliverables. It serves as final approval and authorization to convert the software application from its current “development” status to “live” which will enable it to be viewed by the public and members.

It is understood that when the launch process is started that domain name changes (DNS) may require up to 72 hours before the public will be able to view the new site. It is recommended that clients maintain the current/original website and hosting account for approximately two weeks.

Statement of Formal Acceptance:

The undersigned formally request the site to be set “live” and accept the project as complete.

The undersigned has fully reviewed the final project and authorizes consent for AMS Solutions to finalize the project. Any changes to the project going forward may require additional work and are subject to current rate standards or as outline in the contract between client and AMS Solutions.
